Hi Bob, see email below from Renu. Lora might already have sent this to you. Our available times for a call with WV is:

Wed 10-11 and 1 to 2pm and Thursday at 3pm.

Thanks Carol Ann

Carol Ann Gross-Davis, Ph.D.

Subject: RE: EtO - health reviews discussion request

Carol Ann,

A few weeks ago, Dr. Carol Ann Gross-Davis provided some background information regarding the issues raised in the May 16, 2019 article on NIOSH data that calls EPA's updated EtO assessment into question. The article is, "Reevaluation of Historical Exposures to Ethylene Oxide Among U.S. Sterilization Workers in the National Institute of Occupational Safety and Health (NIOSH) Study Cohort" (https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6572526/pdf/ijerph-16-01738.pdf).

It seems that article was funded by the EtO sterilizer industrial organization, and is talking about how NIOSH calculated (modeled) EtO exposure in workers from 1938 to 1978. There was a gap in exposure data from 1938-1978 that EPA estimated a certain way, but that the article offers an alternative way to calculate (that estimates lower exposures).

Dr. Gross-Davis had offered to speak further on this with our BPH colleagues and us and well as on any other EtO issues. Our colleague at BPH, has requested some further discussion on this.

Also, ATSDR release a Draft Tox Profile on EtO, and this may also have some differences from EPA's analysis.

Would you be available during any of the following dates/times? If not, please let us know what might work with your schedule instead.

Oct. 6th, Tuesday, 2:30 pm or after

Oct. 7^{th} , Wednesday, 10 am – 12 noon; 1 – 2 pm

Oct. 8th, Thursday, 2:30 pm or after

Thanks, Renu

Hi Lee,

We spoke with Dr. Carol Ann Gross-Davis of EPA Region 3 regarding the issues raised in the May 16, 2019 article on NIOSH data that calls EPA's updated EtO assessment into question that you had shared. The article is, "Reevaluation of Historical Exposures to Ethylene Oxide Among U.S. Sterilization Workers in the National Institute of Occupational Safety and Health (NIOSH) Study Cohort."

It seems that article was funded by the EtO sterilizer industrial organization, and is talking about how NIOSH calculated (modeled) EtO exposure in workers from 1938 to 1978. There was a gap in exposure data from 1938-1978 that EPA estimated a certain way, but that the article offers an alternative way to calculate (that estimates lower exposures).

Dr. Gross-Davis indicated she would be very open to speaking with you and/or other DHHR folks on this issue, or other EtO issues. Her contact information is below. She and Erica Thomasson have spoken on EtO issues previously also in case you want to touch base with her. I can set up a call if you would like?

Carol Ann Gross-Davis, Ph.D.

To: Orr, Lee E < Lee.E.Orr@wv.gov>

Subject: EtO

Hi Lee,

It was good to talk with you this afternoon.

I am checking in to the questions raised by the article you sent over – thanks for the reminder.

Once you have had a chance to check with your folks next week, let's get our agencies together, as we discussed, to see where we all are and what our next steps might be regarding EtO.

We can provide updates on our emissions estimation reviews and air dispersion modeling, and we can discuss how the more in-depth cancer registry review is coming along. We can also discuss if/how we may want to reach out to ATSDR Region 3 for a Health Consultation, or consultation/support on DHHR's work.

Have a good weekend.

Thanks, Renu From: Orr, Lee E < Lee.E.Orr@wv.gov>

Renu,

Have you seen this 2019 NIOSH document? I get a little lost on references to which model, but it appears to call into question EPA's EtO exposure risks.

Subject: RE: BPH-DEP Nov 25th call & Dec 12th Ethylene Oxide meeting - notes and action items, updates, references

Good Afternoon,

I hope this note finds everyone well.

I know it has been a while since we've touched base regarding EtO, and that COVID-19 exposure issues have taken priority.

An update from DEP-DAQ is that the CY2017 EtO emissions estimates (both point source and fugitive) evaluation for the NATA hotspot facilities has been completed. The table below summarizes the original, and updated, more accurate EtO emissions estimates. There is an **overall reduction of 2.12 tons** based on using more accurate emissions estimates (particularly more refined stream composition estimates for allocating fugitive emissions). The table below summarizes this information.

DEP-DAQ is still working on more refined air dispersion modeling, including using the updated air emissions data.

The notes below from our December 12th meeting contains a list of items DHHR-BPH was working on, and I wondered who to speak with to obtain an update?

Thanks, Renu

Facility	2017 SLEIS EO Emission (Ton)			2017 EO Emission (Ton) after Review and Correction			
	Total	PS EO	Fugitive	Total	PS EO Fugitive		
UC/Dow/DuPont Institute	2.3738	0.6103	1.7635	0.8699	0.5620 0.3679

Subject: BPH-DEP Nov 25th call & Dec 12th Ethylene Oxide meeting - notes and action items, updates, references

Good afternoon,

This is a follow-up to our Nov. 25th conference call and Dec. 12th in-person meeting to help keep us on-track over the holidays. A copy of the sign-in sheet from our Dec. 12th meeting is attached.

Thank you for explaining some of the aspects of the Cancer Registry (not just WV issues, but national issues).

- For example, the data only counts residents of Kanawha County during the years studied. If a person moved from somewhere else and got cancer that was diagnosed in Kanahwa County, it would be shown as cancer in Kanawha County (regardless of where the exposure occurred). If someone lived years in Kanawha County and moved outside the county, it would not count in the Kanawha County data if they did get cancer.
- Also, the more geographically refined the analysis, the more potential uncertainty if there are non-specific addresses (PO boxes, general delivery, etc.).

Late last week, we recently became aware of a class action lawsuit regarding Ethylene Oxide (EtO), *Mark Letart, et al v Union Carbide Corporation* (Morgan & Morgan law firm):

https://www.courthousenews.com/wp-content/uploads/2019/12/Union-Carbide.pdf. There is a Facebook video post on this lawsuit:

"If you're living within a five-mile radius of these different factories, you have a very high risk of contracting one of these cancers."

Attorney Mike Morgan explains the potential risks of prolonged exposure to ethylene oxide https://www.facebook.com/MMForthePeople/videos/vb.313942829424/833439343742129/?type=2&theater

My notes on our respective action items are below (please feel free to make any additions and/or corrections as needed).

DEP, DAQ

- Dec. 13th press release *completed*, <u>https://dep.wv.gov/news/Pages/WVDEP-working-with-EPA-to-address-issues-involving-ethylene-oxide.aspx</u>
- Dec 13th FOIA response completed
- Dec 19th, 12:30 pm site visit at Union Carbide Corp/Dow's South Charleston facility to become familiar with the EtO processes
 - Steve Blankenship and Lee Orr to accompany DAQ
- Continue to obtain updated data from the facilities, evaluate and review the data, and perform site-specific air dispersion modeling of EtO processes at the Institute and South Charleston facilities; coordinate with EPA Region 3 for resources
 - Facility responses to DEP's formal data requests are due no later than Jan. 15, 2020; some data has already been provided to DEP

DHHR-BPH

- Contact NIOSH to request a specific worker study
 - A November 6, 2019 email from Dr. Carol Ann Gross-Davis of EPA Region 3, attached, contains a summary of EPA's update inhalation cancer unit risk factor, including the national NIOSH data reviewed, as well as a summary of the differences between EPA's updated factor and the proposed Texas Commission on Environmental Quality (TCEQ) factor.
- Obtain pediatric lymphoma cases within the lymphoma data
- Provide County, State and National data for comparison with the zip code and tract data (and block data once completed)
- Obtain a copy of mapping software from within BPH, and map out the known address for various types of cancers associated with EtO
 - 86% of the data can be geo-coded, the other 14% cannot (PO boxes, general delivery, etc); this introduces uncertainty and must be properly caveated
- Develop internal talking points on EtO and how the public can reduce cancer risk factors (lifestyle choices such as exercise, not smoking, healthy eating, etc.)
- Question: One graph showed over 220 in 100,000 for breast cancer in 1997 vs. approximately 20 in 2018. Early detection was mentioned, but doesn't it still count as cancer, regardless of when it's detected? The lymphoma and leukemia rates stayed roughly the same during the same period.
- Check if spontaneous fetal miscarriage data may be available for possible correlation with inhalation exposure areas.
- Contact ATSDR for possible resources

Subject: DRAFT - ethylene oxide press release statement wrt to DEP and BPH/DHHR

While there is no final decision yet on whether there will be a press release regarding Ethylene Oxide, we are drafting such a document to have ready.

Does BPH/DHHR have any particular message you would want included (that is, a joint press release)?

And/or, can someone please review the language below for inclusion in the draft press release?

The agency immediately reached out to the Bureau for Public Health at WVDHHR who did an initial assessment of the cancer registry for the areas of concern in Institute and South Charleston. While no cancer clusters were identified, BPH is continuing their assessment of these areas and working in close communication with the agency.

Thank you, Renu

Subject: RE: Please HELP re: Ethylene Oxide (EtO)

Thanks Steve. Very helpful to know.

If we use this data anywhere, we should note that that rate is based on very few cases / difference not considered significant.

Occupational study would definitely be a more direct way to look at exposure.

Cathy

Subject: RE: Please HELP re: Ethylene Oxide (EtO)

Hi Dr. Slemp,

The leukemia figure for Institute is based on a total of 3 cases, so I wouldn't put much emphasis on that difference. As a statistician, none of the differences I see in these comparisons are concerning.

But as I mentioned, I am not able to adequately isolate the target area in my data – the zip code boundaries do not align well with the areas of exposure. That is why I have recommended contacting NIOSH who might be willing to investigate cancer incidence among daily on-site workers that are likely to have relatively high levels of exposure.

Thanks!

Subject: RE: Please HELP re: Ethylene Oxide (EtO)

Thanks Steve:

So looking at this, the only one that stands out a bit is Leukemia in Institute, and in Kanawha overall. How significant are those differences? Are there other communities in Kanawha that contribute to higher rates in Kanawha beyond Institute?

If significant, anything different that we know about EtO exposure in Institute area vs others and/or about linkage between EtO and leukemia or re other exposures in the area that should be considered?

Hoping you can help us interpret this a bit more / craft some language around findings if we need it with media.

Also, we should include / share info with Dr. Young at KCHD as well before any media activity.

Michelle, let us know what's best. Sounds like DEP info could be released tomorrow? Do we know what DEP data / release will discuss or show and can we anticipate what questions will be raised for us? Can we develop some draft talking points for Allison?

Cathy

Subject: RE: Please HELP re: Ethylene Oxide (EtO)

Hi Everyone,

Looks like a face-to-face will not be possible today. Let's try to get together soon and talk about the details involved in this inquiry.

Below are two summary tables for the latest Cancer Registry data.

The first table shows the percentage of cancer cases by cancer site for four different geographic areas of Kanawha County. For example, the first column shows that 13.4% of all cases of cancer in Institute was breast cancer. The data span from 1993-2019, and show the percentages for Institute, Dunbar, South Charleston, and the remainder of Kanawha County. The percentage of cases of breast cancer, leukemia, and lymphoma in Institute, Dunbar, and South Charleston is not substantially different from the rest of Kanawha County.

The second table shows a comparison of incidence rates for breast cancer, leukemia, and lymphoma for Kanawha County, WV, and the US for the years 2012-2016, the most current years for which rates are available. Kanawha County

ranks 23rd in WV in breast cancer incidence (22 counties in WV have higher breast cancer incidence rates). The rates for Kanawha County are not significantly different from the overall rates for WV.

Here are a few brief caveats regarding these data. In this instance, zip code boundaries do not align well with the expected area of exposure. These zip codes include areas that lie outside the affected area, so the results I have calculated may be quite diluted. Furthermore, we have a fairly high percentage of PO Box and rural route addresses in WV compared to other registries, which introduces an unknown amount of error into the geocoding process. For this reason, I have not analyzed the data by census tract or block groups. I'll be happy to go into more detail about these issues when we meet.

Here are the summary tables. Let me know if you have any questions – I am here until 4:00 today. Thanks!

Percentage of Cancer Cases by Type and Geographic Location 1993-2019								
	Area and Zip Code	•						
	Institute	State of the		Remainder of				
Cancer Type	25112							
Breast	13.4%	11.0%	15.2%	12.7%				
Lymphoma	2.4%	3.5%	2.9%	3.3%				
Leukemia	3.7%	2.0%	2.2%	2.0%				

Incidence Rate* Comparison from 2012-2016										
	Kanawha Rate	Kanawha Rank								
Breast	119.7	23rd	117.5	125.2						
Lymphoma	19.7	41st	21.4	NA						
Leukemia	17.2	12th	14.5	14.1						

^{*}Rate per 100,000

Sounds good! How about now? Or maybe 3:30 pm today?

I will be leaving at 11:20 am this morning to go down to one of the hotspot facilities today, but should be back by 3:30 pm this afternoon.

We can do this as a phone call or you all are welcome to come here to DEP in Kanawha City. Let me know and I can make arrangements!

Subject: RE: Please HELP re: Ethylene Oxide (EtO)

Hi Everyone,

Could we meet for 30 minutes today? I want to discuss details of the limitations of Cancer Registry data for investigating this concern, and those details are better understood when everyone is together looking at maps of the area. Understanding these limitations is very important in evaluating the usefulness of Registry data in this circumstance.

I will pull our most recent data and have a summary available this afternoon.

Thanks!

Subject: Please HELP re: Ethylene Oxide (EtO)

Importance: High

Folks – I got a call from Renu Chakarbarty from DEP DAQ. She had been trying to reach Walt. She wanted to alert us to the fact that DEP will be doing a press release soon about EtO. This is being done because of a FOIA for EtO that will be fulfilled in the near future. They want to do their own press release on the subject rather than letting the FOIA requester release information and spin it to meet their own needs.

She was also asking about the updated info. from the Cancer Registry staff where the cancer risk data was going to be teased apart by zip code to see if that showed any difference in the risk. The timing/need for this has now changed. They would like to have this if it is available or at least know where this currently stands.

The Secretary's will be briefed at the Gov's office this week at the weekly meeting (9 am on Friday). They expect to have their press release ready to go by then.

Any help/guidance you guys can provide would be greatly appreciated. I have not been included in much of the email discussions about this, so I'm not knowledgeable to discuss or provide details to include in the weekly Gov's briefing notes that are due tomorrow by 2 pm.

Thanks! MC
